# NEURO-RADIOGENOMICS MEDICAL AI PLATFORM

Multimodal Brain Tumour Diagnostic & Explainable AI Assessment Report

| | | | |
|---|---|---|---|
| **Patient / Sample ID:** | TEST-TCGA-001 | **Date & Time:** | September 07, 2026 - 18:07:13 UTC |
| **Diagnostic Mode:** | **Multimodal Late-Fusion** | **System Version:** | v2.4.0 (EfficientNetB0 + RF/MLP) |

**PRIMARY AI FINDING: GBM | CONFIDENCE: 99.40%**

## Diagnostic Evidence & Class Probabilities

| Classification Category | Probability |
|---|---|
| Gbm | **99.40%** |
| Lgg | **0.60%** |

*Visual Grad-CAM evidence not requested for this mode.*

## Genomic Biomarker Attributions (Top Influential Genes)

| Gene Symbol | Attribution Score | Biomarker Context |
|---|---|---|
| **VEGFA** | 0.1400 | TCGA Glioblastoma vs LGG Diff. Expressed |
| **EGFR** | 0.1200 | TCGA Glioblastoma vs LGG Diff. Expressed |
| **IDH1** | 0.0900 | TCGA Glioblastoma vs LGG Diff. Expressed |

## Clinical & Methodological Observations

Automated pipeline validation test.

***CLINICAL RESEARCH DISCLAIMER:*** *This medical diagnostic assessment was generated by an artificial intelligence research pipeline (Multimodal Deep CNN + Random Forest/MLP Radiogenomics). It is strictly intended for investigational and peer-review research evaluation. It does NOT constitute an independent clinical diagnosis. All findings must be confirmed by board-certified neuroradiologists and certified neuropathologists.*
